PROFESSIONAL SUMMARY

An Analytical-driven Full-Stack Engineer with 2 years of hands-on experience in AI, Generative AI integration, and data-driven product development. Proven ability to translate business requirements into scalable technology solutions using Python, JavaScript , OpenAI APIs, Gemini API, REST APIs, and LLM frameworks.

Experienced in leveraging customer insights, user behavior analytics, and stakeholder engagement to identify business opportunities and develop innovative AI and Machine Learning solutions. Skilled in translating customer pain points into scalable automation, Generative AI, and data-driven applications using Emerging Technologies that improve operational efficiency, customer experience, and business value.

CORE COMPETENCIES

AI | Generative AI (GenAI) | Large Language Models (LLMs) | Prompt Engineering | RAG / Retrieval-Augmented Generation | Process Improvement | Stakeholder Management | Product Roadmapping | Data-Driven Decision Making | Business Requirements Translation | Change Management | Proof-of-Concept Development | Responsible AI | Governance & Compliance | Data Visualization

TECHNICAL SKILLS

AI & GenAI Platforms: OpenAI APIs, Gemini API, Anthropic Claude, LLM Integration, RAG Systems

GenAI Use Cases: Prompt Engineering, RAG (Retrieval-Augmented Generation), LLM Output Integration, AI Assistants, Knowledge Retrieval Solutions

Programming & Automation: Python, C++, JavaScript, SQL, NoSQL, REST APIs, API Integration, Workflow Automation

Data & Analytics: Data Visualization, Power BI(Familiar) , Tableau (Familiar) , Data Integration, Data Quality, Reporting Solutions, Self-service Analytics,

Cloud & DevOps: AWS, Azure, GCP, Docker, Kubernetes, CI/CD, Git, GitHub

Web Technologies: React.js, Next.js, Node.js, Express.js, MongoDB, Redux, Tailwind CSS, Bootstrap, MUI

Tools: Postman, Figma, VS Code, Burp Suite, Swagger, MongoDB Compass

Methodologies: Agile, Scrum, Process Assessment, Change Management, Stakeholder Management Skills, Technical Documentation

PROFESSIONAL EXPERIENCE

Tietoevry

Aug 2024 – Jun 2025

Apprentice Software Engineer (AI & Automation Focus)

- Partnered with cross-functional stakeholders to define automation requirements, conducted process assessments, and designed AI-enabled automation solutions using Python, OpenAI APIs, and Gemini API — improving workflow efficiency and customer outcomes.
- Integrated Large Language Models (LLMs) and Generative AI technologies into production applications to automate repetitive and manual workflows, enhance colleague productivity, and improve user experiences across IT and content generation use cases.
- Developed prompt frameworks, intelligent workflows, and AI assistants leveraging OpenAI and Gemini platforms; applied retrieval-based systems and LLM output integration to deliver scalable, reusable automation components across multiple business use cases.
- Built and maintained RESTful APIs and API Gateway using Node.js & Express.js, integrating enterprise data sources (MongoDB) for data ingestion, validation, and CRUD operations — supporting data quality and governance compliance.
- Deployed full-stack AI-powered solutions on cloud platforms (AWS, Azure, GCP) with CI/CD pipelines; created technical documentation, user guides, and operational support materials to drive adoption and ensure solution reliability and scalability.
- Ensured alignment with enterprise governance, risk, compliance, and Responsible AI requirements through Agile/Scrum practices, code reviews, and version control (Git/GitHub).

- Translated business requirements into scalable technology solutions; partnered with stakeholders to identify process improvement opportunities, improving portal load speed by 30% and enhancing data accessibility and web security.
- Developed data-driven front-end reporting interfaces using React.js with reusable components and modern design patterns, enabling self-service access to operational insights for business users.
- Resolved 15+ critical UI/UX issues and conducted cross-browser testing using Jest and Cypress, maintaining Responsive Design, Web Security, and Accessibility standards across static and interactive screens.

- Designed and developed full-stack MERN applications, converting business requirements and Figma UI/UX designs into responsive, production-ready interfaces using React.js, Next.js, and Tailwind CSS.
- Collaborated in Agile teams to deliver end-to-end scalable solutions, optimizing deployment pipelines and workflow efficiency across multiple product iterations.

KEY PROJECTS

Web Vulnerability Scanner — AI-Powered Automation Product

- Designed and deployed an AI-powered automation solution leveraging the Gemini API (Generative AI) to scan URLs for vulnerabilities and generate actionable remediation strategies — reducing manual reporting time by 70-80% and improving security posture.
- Applied prompt engineering frameworks to structure LLM outputs into business-ready, structured reports; automated insight generation improved and impacted team productivity by 60% , operational time by 50% , reporting time by 70-80%.
- Demonstrated end-to-end product lifecycle management: requirements gathering, proof-of-concept development, production deployment, and stakeholder documentation — aligning with Responsible AI and governance requirements.

AgencyFlow — Agency Management Platform ([Link](#))

- Built a full-stack MERN platform with role-based access control, JWT authentication, and real-time updates (Socket.io), integrating enterprise systems and data sources to improve data integrity and workflow efficiency.
- Designed Kanban-based task management system, REST APIs (Swagger documented), and a client-facing portal — translating complex stakeholder requirements into scalable, self-service technology solutions with measurable business value.

AI Flashcard Generation Platform ([Link](#))

- Led the product strategy and end-to-end PRD for an AI-powered Flashcard Generation application, leveraging problem-solving, user research, and innovation to reduce the time required to create study materials from PDFs.
- Defined customer journeys, user stories, acceptance criteria, and feature roadmap while collaborating with cross-functional stakeholders to maximize impact and improve the learning experience through AI-driven automation.
- Passionately analyzed user feedback and structured partner data management and content workflows to optimize AI-generated flashcard quality, scalability, and product adoption.

EDUCATION

Chandigarh Engineering College	2019 – 2023
Bachelors in Technology – Computer Science Engineering	Mohali, Punjab
Chandigarh Engineering College	2024 – 2026
Masters in Technology – Computer Science Engineering	Mohali, Punjab

CERTIFICATIONS & ACHIEVEMENTS

- Prompt Engineering Certification — Expertise in designing prompt frameworks, AI assistants, and develop LLM-integrated intelligent workflows for business automation.
- Product Management – Passionate in Handling end to end product management from ideation to delivery and leveraging AI within the process.
